

The Leader in Compressed Air Automation Since 1992

CAM Technologies has been the leader in the [compressed air automation](#) industry since 1992 using non-proprietary Allen Bradley Logix PLC platforms. Our industrial grade platform has been proven in thousands of installations throughout the world. Our systems range from small compressed air applications to the most complex systems in the world today. These systems are proven to save significant amounts of energy by running more efficiently with our exclusive CAMLink™ automation systems. We not only work on the controls side of the system but also identify system design improvements and help implement these improvements to make your system more efficient while increasing productivity.

We also provide [remote monitoring](#) cloud based support systems that will monitor your system 24/7, trend data, notification of alarms or alerts, notify when maintenance is required, ability to trouble shoot systems remotely, and remote system visibility and control. Customers that opt to use this service also receive an extended warranty on the Allen Bradley hardware for the duration of the remote service agreement.

CAM will be introducing several new products this year that will extend our automation and energy savings offerings. Please visit our web-site (www.CamTechnologies.com) or our social media outlets for the latest innovations in [compressed air solutions](#). Preliminary consultation web-based services are available upon request. Please do not hesitate to contact CAM Technologies if you would like to learn more about CAMLink™ automation systems and services.
